Overview

The AD7606 is a 16-bit, simultaneous sampling, analog-to-digital data acquisition system (DAS) with 8 channels. It operates from a single 5V supply and can accept ±10V and ±5V true bipolar input signals while sampling at up to 200 kSPS on all channels simultaneously. Each channel has analog input clamp protection, a second-order antialiasing filter, a track-and-hold amplifier, and a 16-bit SAR ADC. Serial or parallel output.
